BITS AND PIECES....

Helicopter Simulator from Sierra

Described by a Sierra spokesman as a "killer simulator," SIERRA 3D HELICOPTER SIMULATOR is expected to ship this month in IBM format, with an Atari ST version to be ready before Christmas. The program was an unsolicited submission from a college student, which impressed the Sierra staff so much that they purchased it immediately. The simulator includes eight sub-games said to feature outstanding graphics and relentless action. As it was described to us, one of the game scenarios sounds like a scene from the movie, "Blue Thunder," because you guide your chopper among city skyscrapers while being chased by another helicopter. (This one sounds as if it has definite possibilities!)

Animated Adventures

In other news from Sierra, the 3D animated adventure, SPACE QUEST, will be available soon for IBM, to be followed by versions for ST and Amiga this fall and winter. TOWERS OF SEVEN (FANTACIDE) has been cancelled. The anxiously awaited KING'S QUEST III: TO HEIR IS HUMAN should be ready for IBM in November, with Apple, Amiga, and ST versions slated for early 1987. The IBM version of KING'S QUEST III will be Sierra's first entertainment product to support the EGA card, and it will be copyable to hard disk. The 128K Apple II version will also support hard disk and 3.5-inch disk drives. (You may notice an emphasis on IBM product from Sierra. This is due to greatly increased demand for programs in IBM format, credited to strong sales of the Tandy 1000 and a variety of IBM clones.) Sierra is also working on two all-new animated adventures for Amiga and Macintosh, but we were told that it is too early to divulge any details about the programs at this time.

Fantasy Adventure for 8-Bit Computers

Although Sierra has been emphasizing programs for the computers with 128K RAM or more, they will be returning to their roots with WRATH OF DENETHENOR, a two-disk fantasy adventure for Apple II, Commodore 64/128, and Atari XL/XE. The first two versions are set to ship in time for Christmas; the Atari version may be out in time for holiday buying, but it's possible that it won't be ready until early 1987. WRATH OF DENETHENOR should gain extra attention with its special pricing at only \$19.95 suggested retail. (Please check the Availability Update for specific release dates on all Sierra products.)

Hectic Pace at Electronic Arts

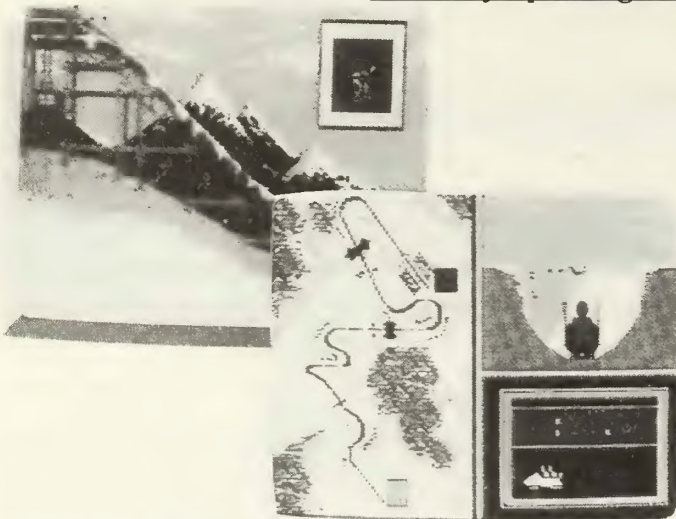

The pace is really hectic these days at Electronic Arts, between the programs from the company itself and the distribution and marketing of their Affiliated Label programs. Three new programs for IBM have just shipped: GRAND SLAM BRIDGE (MSR \$60), WORLD TOUR GOLF (\$50), and the previously unannounced STARFLIGHT (\$50). BRIDGE is not a tutorial, but a program designed for playing and practicing with or without a partner. The program includes over one billion hands. GOLF is for one to four players, comes with 24 courses, and includes an easy-to-use hole construction set. The program also allows the creation of customized computer robot players so that you can simulate playing with any foursome imaginable, from your duffer friends to top pros. (Without question, 1986 will go down as THE year of computer golf simulations.) STARFLIGHT (to be reviewed next month) is a game of outer-space exploration that was reportedly 15 man-years in the making. It includes 280 star systems, 800 planets, and artificial intelligence-based communication with seven alien races, each with its own language, culture, and knowledge of ancient civilizations. A fractal generator creates the planetary vistas, allowing realistic views of a rotating planet beneath you as you come in for a landing. The program's database keeps track of 1.9 million unique locations on each planet, for a total of more than 1.5 billion explorable locations in the game. We have just one question: if STARFLIGHT took 15 man-years to develop, how many months or even years might it take the player to explore all of those locations?

New Titles from Electronic Arts

More new releases are coming from Electronic Arts, including DARK LORD, an illustrated text adventure for Apple II which is said to feature the fastest drawing routines yet seen in a program of this type. AMNESIA, EA's first text adventure, has been delayed several times, but it should finally appear this fall and winter for Apple, Commodore 64/128, and IBM. Also coming soon are ROBOT RASCALS (formerly

...continued on Page 3

Critically Speaking...IBM Compatible

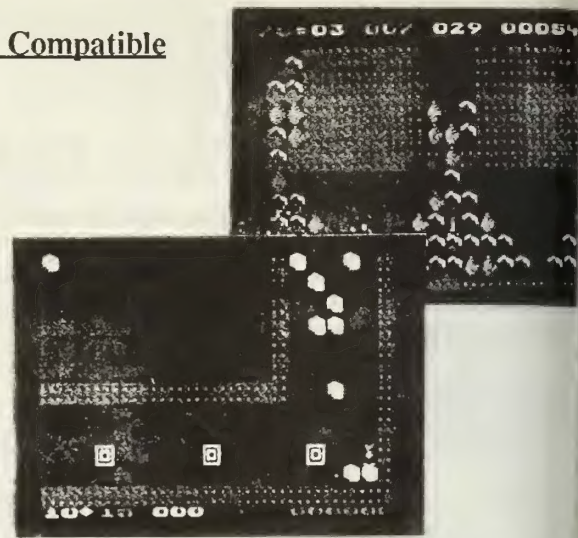

WINTER GAMES (♦♦♦♦/♦♦♦♦) has just been translated for the IBM PC by *Epyx* and it's offers the same fine graphics and gameplay as the earlier versions. There are seven events included within the program: hot dog aerials (ski jumping plus acrobatics), biathlon (cross country skiing and rifle shooting), figure skating (short program), free skating (choose your own choreography), and the grueling bobsled run. Up to eight players can choose any one of eighteen countries to represent, moving on to compete in any one or all of the events. You can practice within any of the events without scoring before moving on to actual competition where a panel of judges will score the events.

Gorgeous Scenery

As has been typical in the other Epyx olympic games, the scenery and graphics are superb. The graphics are greatly enhanced with the fine sound effects, as well as appropriate musical themes which introduce the various events. The colors are dazzling, adding to the realism and enjoyment of the games. The various contests themselves require a wide range of skills and joystick control. There are a number of skills which you'll have to master including precise timing, as well as tiny adjustments in the athlete's body as he works through certain events. Everyone seems to find one or two events that become their favorites, and we're no exception. We especially enjoy the ski jump and bobsled run; however, it's a highly personal choice with all sorts of combinations becoming the favorites of players. There has been so much success with Summer Games and Winter Games (in already released formats), that game players everywhere have written to Epyx with additional event suggestions. As a result of those ideas, watch for World Games to come to your home computer within the next few months. Meanwhile, IBM owners can enjoy the winter events. (1 to 8 players; joystick and color graphics card required; also available for C64, Apple, Macintosh, Atari ST) Recommended (MSR \$39.95)

SUPER BOULDERDASH (♦♦♦♦/♦♦♦♦) has been converted for the IBM PC by *Electronic Arts* and it remains one of our favorites! With Electronic Art's lowered retail on this program, it moves into a "Best Buy" category as it offers both the original BoulderDash, and BoulderDash II. The original game, named Arcade Game of the Year (1984) by Family Computing, features a collection of 16 caves where our hero, Rockford, must collect diamonds while avoiding exploding fireflies, vicious butterflies, and falling boulders. You must maneuver Rockford through the various caves in a strategic manner in order to successfully move on to the next cave. As he digs the passages, the boulders fall and tumble. The trick is to learn in which direction, so you can use the boulders to trap the butterflies and exploding fireflies. If the

boulders hit a butterfly, it will turn into diamonds which Rockford can then pick up.

Additional Fun in Sequel

The sequel, included in the package, offers 16 additional caves, with many of those caves sure to stump players for several sessions until they can devise the strategic way to get through that particular cave. As in the original, it will take quick thinking in order to make your way through the caves. You'll face the same enemies in BoulderDash II as in its predecessor, including the deadly Amoeba who love to eat and turn an entire cave into boulders!

Fast Paced Action

Both games offer frantic action (Rockford taps his foot impatiently whenever you pause too long to think), and the need for strategy. While the 16 screens in the original game offers hours of enjoyment, the 16 new screens in the sequel give you more intricate problems and puzzles. Even the most seasoned player will find hours and hours of intricate play with a total of 32 screens offering five levels of difficulty. One of the all-time great computer games has gotten even better, thanks to Electronic Arts' price reduction! (one player, two player alternating; joystick or keyboard; color monitor only; also available for Apple, C64/128, Atari) Recommended (MSR \$14.95)

Baudville Expands to New Systems

BLAZING PADDLES (MSR \$34.95), the all-in-one desktop illustration package, has just been released for Atari 2600 and is Baudville's first program for Atari users. They promise more to come for Atari this fall, including the casino program, **VIDEO VEGAS** (\$29.95), which will also be converted for Commodore 64/128 (\$29.95) and as Baudville's first entry for Amiga (\$34.95). The colorful program including draw like blackjack, keno, and a video slot machine has been a big seller for the company in its original Apple II version. Baudville is also working on a new program for Apple, **AWARD MAKER PLUS**, which is promised to have more features than "that other certificate maker." The \$49.95 program will have the ability to print borders in color, and parchment paper will be available to give your award certificate that extra-special look.

THE RATING SYSTEM:

4 SYMBOLS = EXCELLENT 2 SYMBOLS = FAIR
3 SYMBOLS = GOOD 1 SYMBOL = POOR

♦ = ENTERTAINMENT PROGRAMS (1st set=quality of graphics; 2nd set=quality of game play and entertainment value)

◇ = APPLICATION PROGRAMS (1st set=quality of graphics; 2nd set=quality of performance and suitability of use in home)

NA - Not Applicable (i.e. all-text programs not rated for graphics)

Critically Speaking...

Commodore 64/128 Compatible

STAT BASEBALL (♦♦♦/♦♦♦♦) comes from the *SubLogic* author of *Football* and it's a fine program for the tactically-inclined players. You begin by selecting the team you like to manage, then pick the team you want to play against. Included in the initial package (team disks are bound to follow if the program is a success) are the baseball teams from the 1985 season, as well as eight classic teams. This includes such all-time greats as the '69 Mets, '59 Dodgers, '61 Yankees, and more. You can also choose from three all-stars--Dodger, Yankee, and the SubLogic stadium (this is a major area of expansion as there is an indication of future availability of a Stadium disk which will feature every Major League stadium in the country). You then move on to whether you wish to play the one-player game (against the computer), two-player, or watch an all-computer version (a good way to introduce yourself to the action).

Butter Up

Once you're ready to manage your team, you'll find the choices available to you quite varied. When you're batting you have a total of eight different options--from batting normally to bunting for hit or sacrifice, hit and run, and more. Your second offensive decision must be made concerning your base running options. You'll have to make choices regarding the aggressiveness of the running, and whether you wish to steal. Once you've chosen the batting option, the screen goes to the actual field where you'll see your choice enacted. Upon the finish of the play, you'll go back to the statistics screen where you'll be told the result of the play (anything from a home run to strike-out, walk, put-out, double-play, etc.). You can also change the batting line-up, remove a pitcher, etc.

Timing the Field

You'll have defensive decisions to make, as well. Begin by making a pitching choice, whether it's to pitch normally, aggressively, intentional walk, pitch out, or pitching around the batter. Once that's done, you'll have to set your defensive alignment. It's your choice to move the infield in, guard the corners, play aggressively, etc. All the choices, defensive and offensive, can be made with either a joystick or via the keyboard.

Trading, Updating, and More

You can really get deeply involved in the art of trading and creating new teams of your own. Via a Stat-Keeper disk, you can update your player's performances in the games you've been playing. That can be done automatically or manually, depending on the information you need. You can use the Stat-Keeper when you are making decisions regarding trades and the like. By the way, a tremendous feature of the game allows you to print out a hard copy of not only team stats, but of box scores of individual games played or series. The statistics which are built-in include everything you'd find in the real thing from the obvious things such as batting average, strikeouts, but also including total number of doubles, triples, home runs, ability to throw the ball, fielding percentage, base running ability, etc.

Program With Depth

Initially we thought, "yikes, another baseball game!" However, we were quickly impressed with the depth of this program. There was also something very satisfying being able to see the actual play take place, as opposed to some statistical games which are nothing but names and numbers. And every player on the field acts and moves individually on every play. Being able to print out the player stats and box scores are a big plus for those armchair managers out there who want to study the stats to be able to maximize their efforts. We are very impressed with this program and recommend it to anyone who enjoys the statistical side of sports (and we know there's lots of you out there!) (One two-player alternating; joystick or keyboard) (Recommended (MSR \$49.95))

Electric Dreams Imported Software

Activision's newest label, Electric Dreams, makes its debut this month with three titles imported from England. The mission of this new label is to bring proven software hits from outside the U.S. to American game players. The move is a natural for Activision because of their strong presence in the international software market.

Three for Commodore and Apple

The first two Electric Dreams releases, **ROCKY HORROR SHOW** and **SPINDIZZY**, are reviewed this month and should start appearing in stores as you receive this issue. The third release, **ZOIDS**, will be available later this month. **ZOIDS** is an action/adventure game based on the Tomy toy characters, and the game has earned eleven software awards in Europe. In it, you are an Earthman in the world of Zoidstar, where you attempt to save the planet from the Red Zoid Imperial Leader, Redhorn the Terrible. All three games will be available for Commodore 64/128 (MSR \$29.95) and Apple II (MSR \$34.95).

Software Toolworks Debuts

Previously known by the name Software Country, the publisher of "Software Golden Oldies," "Chessmaster 2000," and the upcoming "New Technology Coloring Book" has changed its name to Software Toolworks. The company was founded by former radio and TV personality, Les Crane, and its products are distributed by Electronic Arts under their Affiliated Label program.

Bits & Pieces...continued from Page 1

known as **SCAVENGER HUNT**), a combination card and computer game for C64 and Apple, and **MAKE YOUR OWN MURDER PARTY** for the same two systems plus IBM. **RADIO BASEBALL**, a strategy game with a broadcast feature, is set for IBM this fall. And adventurers won't want to miss **BARD'S TALE II: THE DESTINY NIGHT** (formerly **THE ARCH-MAGE'S TALE**). And finally, fans of the inimitable Chris Crawford can look forward to his action-oriented wargame for Macintosh, **PATTON VS. ROMMEL**.

Lots of Conversions, Too

Plenty of existing Electronic Arts titles will find their way to new systems over the next several months: **AGE OF ADVENTURE** and **MAIL-ORDER MONSTERS** for Atari XL/XE, **LORDS OF CONQUEST** for Atari and Apple, **SEVEN CITIES OF GOLD** for Macintosh, **MARBLE MADNESS** ("looking unbelievably good") and **ARCTIC FOX** (said to be even faster than the original game on Amiga) for Apple and C64, **REALM OF IMPOSSIBILITY** for Apple, and **DELUXE MUSIC CONSTRUCTION SET** and **THE BARD'S TALE** for Amiga. We were told that **THE BARD'S TALE** is an "absolute stunner" on Amiga. Because of the graphic animation capabilities of Amiga, it's "the first time that the monsters are really scary." And sooner or later it had to happen: Electronic Arts has finally announced that its first entertainment product for the Atari ST will be **SKYFOX**. (**FINANCIAL COOKBOOK** is the company's sole previous entry in the ST market.)

EA Affiliated Labels

On the Affiliated Labels scene, Origin Systems plans conversions of **AUTODUEL** (C64, ST, Macintosh, Amiga), **MOEBIUS** (C64), **OGRE** (Atari 8-bit and ST), **ULTIMA III** (ST and Amiga), and **ULTIMA IV** (IBM). And Origin has re-worked the original **ULTIMA I**, the game that started it all, with better graphics and assembly language so that it looks better and runs faster. The classic game that many of today's newer players may never have seen will be available for Apple, Atari XL/XE, and C64 this winter. Origin has also picked up and re-designed **RING QUEST** (Apple) from Penguin, an illustrated text adventure that never got into full distribution before. Software Toolworks (formerly Software Country) will complete the **CHESSMASTER 2000** lineup soon with versions for Amiga, ST, and Macintosh. They also plan to release the ST version of **SOFTWARE GOLDEN OLDIES** plus a new title for Amiga and ST, the **NEW TECHNOLOGY COLORING BOOK**. (Please check the Availability Update in this issue for specific release dates on programs from Electronic Arts and its Affiliated Labels.)

Critically Speaking...Amiga Compatible

MARBLE MADNESS (♦♦♦♦/♦♦♦♦) from *Electronic Arts* is Larry Reed's Amiga translation of the Atari coin-op game. Although the object of the game is simple--guiding your marble to the goal line of each screen--accomplishing that object is anything but easy. Along the 3-D tracks and hills, there are many obstacles to overcome. There are six different raceways, each with its own musical score and different creatures to contend with. You start with a Practice Race and finally move up to the Ultimate Race (#6). I have played this game for many hours and have yet to finish the Ultimate Race.

Spectacular Animation

The 3-D terrains in this game are incredible. The graphics and sounds will blow you away. And the animation is the best I have seen to date on the Amiga. From the "Marble Munchers" to the waving flags at the goal line, the animation is smooth and practically flawless. It's like watching a cartoon instead of just playing a computer game. And the game definitely keeps you on the edge of your seat and involved in the excitement of every roll of your marble. Lots of Surprises. *Electronic Arts* does not tell you what to expect in this game. Only a reference card with loading instructions and game options is included in the package. I don't want to give away anything either, but I can tell you that there is action and surprise around every corner. One of my favorite raceways is the "Silly Race," where everything you know is wrong, and everything turns out to be the opposite of what you expect!

Controller Option At the opening Option Screen, you can select one or two players, difficulty level, and the type of controller you wish to use. You can play with a joystick, mouse, or track-ball. And if you're fortunate enough to have an Atari-type track-ball, this is the time to break it out of moth balls. With the track-ball, which is what the arcade version of the game uses, you have the ability to make extremely precise movements with your marble. If you don't have access to a track-ball (it's almost impossible to find one in a store anymore), the next best thing I have found is the mouse. It's almost like an upside-down track-ball. My least-preferred controller is the joystick. I found it too easy to overshoot my marble with this controller and found myself falling off a cliff countless times. Besides the basic movement of the marble with your controller, you also have a "turbo-charge" feature. You get a little extra speed when you press the firing or mouse button while pointed in the direction you want your marble to move. This comes in handy when you're going up a hill or jumping--or when a "Marble Muncher" is about to swallow your marble!

Outstanding Conversion

In most cases, when an arcade game is translated to a home computer, something gets lost. Not this time! Absolutely everything from the pay-for-play machine is here--the same sights, the same sounds, the same play action and even more. You can even have two players racing to the goal at the same time, just as you can in the arcade version. But this is the first time that a game translated from a coin-op is even better than the original. The designers have added the turbo-charge feature, and they have given the Amiga version stereo sound, which is fantastic. The sound effects couldn't be better, such as the crash of two marbles colliding which reminds me of the sound of two glass cookie jars hitting each other.

Nit-Picking Time

The only negative things I noticed were extremely minor. One thing this game does not have is a "pause" feature. However, you do have a 15 to 18 second break between rounds while the next raceway loads from the disk. Another thing I noticed is that when there are two marbles on the screen, and depending on where you might be, the action does slow down slightly.

Best Game to Date

I feel that this is the best game for Amiga that I have seen and played to date. Hats off to Larry Reed and the *Electronic Arts* team who brought us a magnificent piece of software. This was a major effort by a lot of people. (I never saw so many credits for one game.) It was certainly delayed for a

while, but well worth the wait. This is one truly outstanding game that shows off some of the Amiga's most outstanding qualities. (Solo or 2-player competitive; 512K; Mouse joystick or track-ball.) Reviewed on Amiga; coming soon to Commodore 64/128.

Recommended. (MSR \$49.95)

--Cal Chen

Stuart Smith's ADVENTURE CONSTRUCTION (♦♦♦♦/♦♦♦♦) has been newly converted for Amiga by *Electronic Arts*. In bringing this superbly crafted program to Amiga, new features have been added, along with a brand-new, full-length adventure, "Galactic Agent," by Ken St. Angelo (author of "Tunnels and Trolls" and president of the Adventure Construction Set fan club). The other adventures present in the original versions of the program for Commodore 64/128 and Apple II are also here (full-length "Rivers of Light," one short adventure tutorial, and six mini-adventures on a variety of themes).

Dream-Come-True Package

Along with the playable adventures you get a dream-come-true package for any adventure fan: three different construction sets, allowing you to give fullplay to your imagination in creating games in the Fantasy, Spy/Mystery, and Science Fiction genres. No programming knowledge is required to build even the most complex adventure imaginable. An adventure can contain as many as 240 "rooms" and 100 props--a variety of terrains (desert, mountains, forests, rivers, plains), all kinds of portals, magic spells, text, music, and a truly mind-boggling array of creatures and things. And all of this wealth is very easy to control and use--even easier and faster than previous versions. (If you get in over your head in creating a complex adventure, you can even let the program finish it for you.) One nifty trick, exclusive to the Amiga version of *ADVENTURE CONSTRUCTION SET*, is the ability to keep both mouse and joystick plugged into your computer at the same time, using the mouse for editing and the joystick for playing, without having to unplug either one.

Improved Graphics, Digitized Sound

Graphics have been improved greatly in this new version, taking advantage of the Amiga's wonderful way with pictures. When editing graphics, you can use any of 32 colors, each of which can be varied further with hue, color, and brightness controls. And this version of *ADVENTURE CONSTRUCTION SET* also uses digitized sound, with a choice of 41 kinds of musical themes and sound effects. The possibilities are endless in this program that offers great depth, flexibility, and countless hours of creative fun for adventure lovers. The Amiga version is the best yet--don't miss out on the fun! Supports 4 players; Mouse and/or joystick plus keyboard; 512K slots; one or more blank disks required.) Reviewed on Amiga; also available for Commodore 64/128 and for Apple II (at \$49.95). Recommended. (MSR \$39.95)

Talking Disks from Covox

Covox, developer of the Voice Master speech synthesis and recognition system, will send you a disk that talks for \$5 including first-class postage (\$7 outside North America). The disk, which is not copy-protected, is meant to be an introduction to the capabilities of the Covox Voice Master speech and music processor. If you're curious about how to make your computer talk, send payment to Covox, Inc., 575 Conger St., Eugene, OR 97402. Be sure to tell them which computer you have. (Talking Disks available for Commodore 64/128, Apple II+/IIe/IIc [64K], and Atari XL/XE.)

BACK ISSUES AVAILABLE...

Don't miss out on all the great back issues! We've been covering the computer and dedicated game field for five years. Most issues are still available (none left of Vol 1, #3). Send \$2.00 for each back issue you want. Buy six or more, and they're just \$1.50 each. Make certain you have a complete set!

Critically Speaking...Amiga Compatible

DIABLO (♦1/2♦♦) is a strategy/puzzle game created by Jay and Ruth Foreman and released on the *Classic Image* label. The game consists of tracks, panels, and a ball, and the object is to keep the ever-rolling ball from falling off a track or panel. This is done by moving tracks and panels around with your mouse.

Fields and Tracks

The playfield consists of 119 panels with two tracks per panel. There is one open or missing panel, which is what you use to manipulate the tracks and panels, keeping a continuous path open for the ball. Vertical and horizontal moves of tracks and panels are allowed, but diagonal moves are not. The playfield occupies the center portion of the screen, with all panels displayed at once (no scrolling). To the left of the playfield is a "Status" area which shows the level you are on, the bonus score, extra balls available, and the "wrap count." When the wrap count reaches zero, the ball will wrap around the track, provided there is a track or panel to receive it on the other end.) To the right of the playfield is a group of options: New (to start a new game), save, load, pause, quit, music (turns off music but not sound effects), and hyper-ball (to speed up the ball).

Not for Everyone

If you are looking for mind-boggling graphics or sound effects, you certainly won't find them here. The sound effects are minimal and very simple. The graphics are very plain. In fact this game looks as if it might have been done on a Commodore 64 or Atari 8-bit computer instead of an Amiga. Because the rolling ball is so tiny and so much background detail (119 panels) has been crowded into only a portion of the full monitor screen, the game gets to be a little hard on the eyes after a while. (Some scrolling, which would allow for larger graphics, might have helped.) The music drove me nuts after five minutes of play, and I really would like to thank the programmers for putting in the Music on/off option. As to the play value, some people may get some enjoyment from the strategic planning required to keep the game going. Initially, I found the game overly frustrating to play. And I can recommend the game, if for no other reason than the fact that it doesn't even begin to tap the capabilities of the Amiga computer. DIABLO is a waste of resources comparable to listening to a monaural record on a \$3000 stereo system. With all the other great games on the market that DO use the Amiga's capabilities, I can't imagine wasting time on this one. Of course, if the premise of the game seems to interest you and you're attracted to its \$29.95 price, then maybe you should get it. But I have a question for you. Why in the heck would you buy an Amiga and settle for software that delivers much less than the computer is capable of? (Solo play; Mouse; Paul.) Reviewed on Amiga; also available for Atari ST. Not recommended. (MSR \$29.95)

--Cal Chen

Playboy Developing Software Line

Apparently looking for new arenas to conquer, Playboy is preparing to enter the computer software market. We have no idea what they're up to, but a reliable source tells us that Playboy has closeted a few top designers and committed everyone involved to absolute secrecy. At least they won't have to worry about their software products being pulled from the shelves of 7-11 Stores, since those convenience outlets don't sell computer programs!

Scarborough Absorbed by Mindscape

Scarborough Systems, makers of several productivity software programs including Mastertype, has had its assets acquired by Mindscape. Availability of the programs should continue, via Mindscape.

One Computer Shopper's Lament.... a Light-Hearted Look (or Is It?)

Well, I've decided to make the plunge...I'm going to buy a computer. I think I'll head to my nearest computer store and buy a Commodore 64. So, in I go...

The salesman says that's no problem, do you want the C64 or the C64C. For about twice the price, you'll get the latest model of the dichard. I ponder this, 'cause I don't wanna own last year's anything. While I'm trying to decide, I see a C64C semi-lookalike and ask what it is. The response is, it's a C128, which I can have for about \$300. It's double the computer of the C64. And it's a WHOLE lot better than the 64 or 64C. It runs all the 64 software, but there isn't much software made specifically for the added memory. So, I scratch my head, and happen to see out of the corner of my eye, a nifty color monitor with some impressive color graphics on it. I say, "that looks like the C128. Does it really do all that?"

"No, that's the Commodore Amiga. For under \$1000, it does all the things a Macintosh can do, only in color, and it's a great computer."

I say, "Macintosh? It does all the Macintosh functions for less than \$1000? I'll take it!"

The salesman says, "No...it CAN do all those Mac things, but there's not too much software at the moment."

So now, pondering the C64, C64C, C128, and Amiga, I am completely baffled! I think, MAYBE if I look at them all one more time, I can decide. I look once more at the 64, 64C, the 128, and proceed to the display area for the Amiga. I suddenly realize someone turned this Amiga off, so I ask the salesman to see it again. Then he says, "That's not an Amiga, that is the PC. It's compatible with the IBM PC."

I gulp, "IBM compatible?!"

He says, "OH! I didn't know you were looking for an IBM compatible computer. Here, look at these...the Commodore PC and the Commodore AT."

Seeing a nearby lounge, and feeling the need to lie down to contemplate all that's been said, I head off for the soda machine. Next to the vending area, there is a tv set with Cable News Network, advertising the Commodore Plus-4 for \$99.95. I start to feel dizzy, and a clerk walks in and offers some assistance.

I say, "I'm thirsty, would you have any caffeine-free Classic Diet Cherry Coke Light???"

Access Dow Jones

Meca has just introduced MANAGING THE MARKET for IBM owners, allowing automatic access to Dow Jones News/Retrieval Service. This communications program can be used by itself to update securities prices or in conjunction with spreadsheets like Lotus 1-2-3 or Meca's Managing Your Money. Users can create customized "hot list" (of up to 225 securities) to check key prices. Purchasers of this \$149.95 program get a free password for the Dow Jones News/Retrieval service (\$75 value) as well as an hour's free connect time from Dow Jones.

Coleco Denies Computer Rumor

Two days after we went to press on our August issue, a Coleco representative returned our calls about the Macintosh-like, color computer which we had been told was secretly in development. The rumor was cordially--but flatly--denied. We did NOT get one of those responses that "neither confirms nor denies," the kind of answer which can lead you to believe that something really IS going on which they can't (or won't) talk about. It sounded like a genuine denial to us.

Thanks for the Memory

A computer wouldn't be a computer without memory. And if you get a few computer or game system owners together, sooner or later they will start comparing the relative merits of their machines, inevitably coming to the point of how much "memory" each system has. Anyone who is the least bit computer literate has learned to throw around a few numbers followed by that magic letter "K" (for "kilobyte," a measurement of memory capacity.) It has become very fashionable among computer owners to speak of 128K this and 512K that, even if they're not too sure about what it all means.

What Is Memory?

Memory, according to a dictionary of computer terms, actually refers to two different things. Since this newsletter is not intended as a technical journal (we leave that to others), let's explain it as simply as possible. The first meaning of memory covers the internal electronics of the computer itself, the storage area for data and programs which is a fast-working, but temporary holding area. It's temporary in the sense that anything held in this memory will disappear forever if the power to your computer is interrupted. This kind of memory is referred to as "RAM" (Random-Access Memory or read/write memory), and it's what most people mean when they use just the general term "memory." For example, we've all heard statements such as "my friend's computer only has 64K [RAM], but mine has 128K [RAM]." (A certain bragging tone can usually be detected in a statement like this, because it's meant to imply that "mine is better than his," which may or may not be true.)

External Memory

The second meaning of memory is external to the computer and refers to memory which works more slowly than the computer's own internal memory. This kind of memory is sometimes called "mass storage," and its home is within magnetic media read by floppy or hard disk drives, cassette tape drives, and the like. More exotic items, such as CD-ROM drives, fit in this category, too. (CD-ROM stands for "Compact Disc Read-Only Memory.") There are two main functions of external memory: loading information (programs) into the computer's internal, temporary memory and permanently saving other information (your data) so that it won't vanish into thin air when you turn off your computer. Your computer is virtually useless without both kinds of memory, internal and external, and the way these two kinds of memory interact has a lot to do with the kinds of programs you can and cannot run on your computer.

How Much Is Enough?

Back in the "dark ages" of personal computers (about four or five years ago), the 48K RAM in an Apple II+ or Atari 800 was considered a generous amount among computers typically used in the home. Many computers came with much less, such as the 5K Commodore VIC-20 or 16K Atari 400. The Commodore 64, "loaded" with 64K of RAM, was pretty fancy stuff, even though less than 40K of that memory space is usually accessible to the user. Now computer owners are straining at the memory boundaries of their machines—pushing 128K Apple IIs to 256K and beyond, turning 128K Macintoshes into 512K Fat Macs and full megabyte Mac Pluses, upgrading Amigas from 256K to 512K, eyeing Atari 1040STs over 520STs, and wondering where to find more memory space in their 640K IBM PCs. These amounts of RAM were beyond imagination just a few years ago, and yet computer owners keep looking for more. Just what are these people DOING with all that memory, anyway?

More Sophisticated Programs

Today computer owners are running far more sophisticated and powerful programs on their machines—programs that do more, programs that offer more spectacular graphics and sound, and programs that are just plain bigger than they used to be. All of this means that they are memory-grabbers. And in the interest of being much more "user friendly," some of the computers themselves eat up large chunks of their own RAM in providing graphic-oriented displays and other niceties, leaving less available RAM as working space for programs and data. The Macintosh is an excellent example.

Because of its graphic interface, a 128K Mac actually leaves less working space for programs and data than does a 12 Apple IIe. Thus, two computers with the same amount of RAM may not be able to handle equivalent programs because each computer uses its RAM space differently. And there is another factor that affects a computer's ability to handle certain kinds of programs: the capacity of its external storage memory.

Memory Comparisons

The interaction of a computer's internal RAM storage and external disk storage is well illustrated by looking at a single memory-intensive program available across multiple systems. The best example we can think of is the new Interactive Fiction Plus line from Infocom. Because these are text-oriented programs without graphics, the Infocom programs appear virtually identical across systems. For example, TRINITY runs only on these machines: Amiga, Apple II (128K minimum), Atari ST, Commodore 128, IBM, and Macintosh (512K minimum). At first glance, it would appear that TRINITY's main requirement is a machine with at least 128K. Then you won't run it on a 128K Mac? Remember, the Macintosh needs a lot of its memory to manage its graphic interface, leaving less working space for a very large and complex program like TRINITY. Therefore, TRINITY needs 512K on Macintosh.

Problems with Disk Space

We can hear our Atari-owning readers grumbling at this point, "But I have a 128K Atari 130XE. Infocom should make TRINITY for my computer because it has enough memory!" True, the 130XE has enough RAM to handle the program, but the problem here is the disk drive. Even in its enhanced density mode, the Atari 1050 Disk Drive allows only 135K of data on the disk. According to the man who should know, TRINITY author Brian Moriarty, that simply isn't enough. TRINITY could run on the Atari 130XE only if 10 disk drives were required to be on-line at the same time, an impractical requirement because of the relatively small portion of Atari owners who have two disk drives. Brian also notes that "it's a miracle that TRINITY runs on the Apple II" because it barely fits. The problem is not with the 128K of internal Apple IIe memory, but with limitations of disk space. An Apple disk drive allows 143K of data on a disk, and the second side of the TRINITY disk contains 170K. As Brian explained it, "Side two of this disk is formatted in a way that's the devil's work. We had a teenager who worked for us a few years ago and came up with this method of having a giant sector per track." This opened up space that is normally used for separating sectors, and the space was used for data. For designers using such tricks to squeeze more into their programs, is it any wonder that there is more and more demand for memory in today's computers?

CinemaWare Looks to October Releases

Master Designer Software, developer of the CinemaWare series of interactive movies, is preparing for its first releases: DEFENDER OF THE CROWN (Amiga), THE KING OF CHICAGO (Macintosh), and S.D.I. (Atari ST) next month. Additional titles, SINBAD AND THE THRONE OF FALCON and STAR RUSH (both Amiga) won't be ready until early 1987. Conversions are already planned in early 1987 for S.D.I. (Amiga) and DEFENDER OF THE CROWN (Atari, Macintosh, IBM and Commodore 64/128). Behind-the-Scenes Tour Watch for next month's issue, which will feature a behind-the-scenes tour of Master Designer Software's facilities. Based on the few samples of their interactive movies which we saw at the Consumer Electronics Show in June of this year, we can't wait to get a look at the progress on these innovative programs!

TOP GUNNER from Microprose

Microprose seems to be taking aim at fans of this summer's hit movie, "Top Gun." The company has just released TOP GUNNER for Atari XL/XE and Commodore 64/128 (MSRP \$29.95). This is not a new simulation, but rather a compilation of three previous Microprose titles: AIR RESCUE I, MIG ALLEY ACE, and HELLCAT ACE. If you like air combat simulations and don't already own these titles, the TOP GUNNER package is a great bargain.

Not Another Computer Book!

Just when you think that every conceivable computer-related topic has been exhausted, when you think no one could possibly find anything really different and interesting about which to write yet another computer book, someone comes along to prove you wrong. The someone in this case is Dan Gutman, a 30-year-old syndicated newspaper columnist who writes about computers and technology. He is also the former editor-in-chief of *Video Games Player* magazine and its successor, *Computer Games* magazine. His book, due for late August release from Compute Books, is titled **I Didn't Know You Could Do THAT With A Computer!**

Purpose of Home Computers

Struck by the press release we received about his book, we gave Dan Gutman a call at his New York office to ask him a few questions about the subject of his book, the "practical, minimal, and wonderful software" which he has dubbed "Weirdware." After a few minutes of conversation with this outspoken writer, it became clear to us that his purpose is not short of proving to anyone who will listen that the personal computer in the home does have a purpose—even minor purposes. "Why do I need a computer?" Gutman changes. "Why do I need a toaster? All it does is turn bread brown. A computer can be used for hundreds, even thousands of applications. Maybe because it doesn't have just one specific purpose, people think it has no purpose."

Personal Crusade

Gutman said that while he was the editor of *Computer Games* magazine, he thought that computers were good for games, word processing, spreadsheets, possibly databases, and little else. Then he started noticing tiny ads in the back of computer magazines, many of which were placed for programs produced by very small companies. He found programs to help you read a horoscope, write your will, learn the Bible, dissect a frog, improve your memory, and on and on. As Gutman explains, "these are things you might want to do with a computer if you don't write, don't run a business out of your house, and don't want to spend \$1000 to play games." He began collecting a file of these unusual, practical, interesting, and sometimes silly programs which he calls "Weirdware." The file grew to become a book, as Gutman launched "a personal crusade to put computers in the American home." He believes that people "have to see ways to use a computer in their everyday life" before this crusade can succeed. "For most of us, picking the right

horse or picking a winning horse are much closer to home than managing a business," he adds.

More Than 100 Programs

Gutman's book covers more than a hundred different programs, loosely organized in categories of Home and Family, Health and Fitness, Religion, Simulations, Astronomy, Sports and Hobbies, Gambling, Debatable Sciences, the Arts, Mental Health, Learning, Automobiles, Telecommunications, Animals, and a category for programs that didn't fit anywhere else. Many are programs you've never heard of and won't see in a software store. Gutman explains, "The book is my way of trying to explode the myth that the computer has no practical purpose in the home." He goes on to say that "the computer is the only appliance that you can bring home, plug in, turn on, and watch it do absolutely nothing—until you plug in all this wonderful stuff, Weirdware." Gutman believes that Weirdware is the future of computing, and he intends to let everyone know about it with his new book **I Didn't Know You Could Do THAT With A Computer!** (\$14.95, Compute Books)

Critically Speaking...

Commodore 64/128 Compatible

GAMEMAKER **SPORTS** (♦♦♦♦/♦♦♦♦) and **SCIENCE FICTION** (♦♦♦♦/♦♦♦♦) **DESIGNER'S** **LIBRARIES** from Activision are meant to be used with Garry Kitchen's GameMaker: The Computer Game Design Kit, a program that earned Garry the Computer Entertainer "Designer of the Year" award in 1985. Each Library disk

includes a wealth of game elements to add to the fun of using the original program, including background scenes, sprites for characters and objects, animation routines, sound effects, and background music. As we took a tour through the two Libraries, we were very impressed with the highly professional look and sound of all the game elements provided. And everything in these two Libraries was designed using the original "GameMaker" as the programming tool, which gives you some idea of how sophisticated a tool "GameMaker" really is.

Tools to Let Your Imagination Soar

If you love sports games and would like to try designing a few with your very own special touches, the **SPORTS LIBRARY** will certainly make your job easier. Backgrounds and sprites include settings, characters, and objects for tennis, auto racing, golf, baseball, archery, boxing, football, hockey, pool, darts, skiing, and decathlon. To make your game more realistic, there are crowd sounds, referee whistles, revving engines, buzzers, the crack of a bat, and much more, along with musical themes such as those from the Olympic games. The **SCIENCE FICTION LIBRARY** gives you a fantastic assortment of aliens, spaceships, astronauts, explosions, missiles, weapons and more to be used in settings on space stations, planets, under the ocean, in caves and other strange places. There's plenty of music to choose from and a great variety of useful sounds, such as airlocks opening, blasters zapping, and spaceship motors. These Libraries provide you with the tools to let your imagination soar. Everything you find can be used as is, or you can tweak and fiddle with things until they're exactly the way you want them to be. No one who owns and enjoys "GameMaker" should be without one or both of these excellent Libraries. (Solo use; Joystick or Keyboard; GameMaker program required.) Commodore 64/128 version reviewed. Also available for Apple II at \$24.95 each. Recommended. (MSR \$19.95 each)

SPINDIZZY (♦♦♦1/2♦♦♦1/2) is one of the first titles from *Electric Dreams*, the new Activision label that promises to bring the best of imported software to U.S. gamers. This one is a former #1 hit on three British charts, and fans of arcade-style skill games should find it very much to their liking. The story behind this game is that you are a mapmaker who has been called upon to explore a newly discovered "alternate dimension" which is hanging precariously in space. Using **GERALD**, a Geographic Environmental Reconnaissance Land-Mapping Device, you set off to explore and map this surrealistic new world which is composed of some 400-plus 3D screens. There is no time for leisurely wandering about while gawking at the scenery, though, because a time limit has been imposed on your explorations. At least there are jewels scattered about this strange place which can be gathered to add to your time. But don't let the jewels give you a false sense of security, because many of them are extremely difficult to reach.

Convoluting World

It had to be a diabolical mind that conceived the convoluted world of this game. Even the seemingly flat surfaces have strange effects on the gyroscopic action of **GERALD**. And then there are the narrow ramps where a single wrong move sends **GERALD** hurtling into the blank infinity of space. There are mazes that seem to have no way out, lifts that are activated in secret ways, and the most amazing passages through obstacles of water and ice. There are shortcuts, trampolines, and puzzles to solve. The 3D screens of **SPINDIZZY** range from moderately difficult to downright impossible, and they'll make you slightly dizzy while they demand your total concentration. Don't tackle this one unless you're really good with a joystick, because the feeling of near-weightlessness in the game demands a delicate touch. **SPINDIZZY** has great graphics, delightful music, and it's absolutely addictive. (Solo or 2-player alternating; Joystick; Pause.) Commodore 64/128 version reviewed. Also available for Apple II at \$34.95. Recommended. (MSR \$29.95)

Critically Speaking...Multi-Systems

MERCENARY: ESCAPE FROM TARG (♦♦♦/♦♦♦♦) is a combination of adventure game and flight simulator designed by Paul Woakes for Novagen Software Ltd. and released in the U.S. by Datasoft. In this game, your role is 21st Century soldier of fortune, an adventurer whose spacecraft crashes on the planet of Targ. Your ship cannot be repaired, so your ultimate goal is to find a way to escape from the planet. You're not completely on your own, because you have Benson, a ninth-generation, artificially intelligent portable computer, who becomes your link to the alien world of Targ. Soon after your crash landing, Benson informs you of a ship for sale and of a message from the Palyars, the peaceful inhabitants of Targ. They want your services as a mercenary in their resistance against the invasion of the Mechanoids, a race of robots who are attempting to take over Targ. Later, the Mechanoids will also offer to pay for your services. However, you must learn to tell the difference between Palyars and Mechanoids before you can earn much of anything from either.

Lots of Choices

This is an open-ended game with lots of choices, including three ways to get the interstellar rocket ship which you will ultimately need to escape from Targ. It's a game of large territory, including the Central City of Targ, the underground headquarters complex of the Palyars, and the Colony Craft which orbits above the planet where you will be able to sell items that you find on Targ. Well-honed map-reading and navigational skills are crucial to your success in escaping from Targ. Maps are included in the package for the Central City, the underground, and the Colony Craft. Benson helps with an ever-present compass and a location indicator that works on the planet's surface. (Surface locations are denoted with coordinates.) Traveling around the planet is accomplished on foot (very slow, but sometimes necessary), in ground-based vehicles (GBVs), and in four kinds of aircraft. There are many places to explore on the planet, but don't get sidetracked by too much idle sightseeing.

Tremendous Depth

MERCENARY offers a view of Targ rendered in 3D vector-style graphics. The sensation of movement over surfaces and through space soon becomes quite realistic, whether you travel by foot, GBV, or air. What gamers will really appreciate, though, is the tremendous depth of this program. The landscape of Targ turns out to be vast, with countless discoveries awaiting the adventurous Mercenary. The underground labyrinth of tunnels and chambers is equally exciting to explore. With experience, the Mercenary learns to interpret subtle clues found in the colors of the walls and the shapes of doorways. And then there is the challenge of dealing with the Palyars and the Mechanoids. There is even the thrill of battle action if the Mercenary becomes involved in the conflict between Palyars and Mechanoids. A combination of adventure, flight simulation, battle, exploration, and strategy makes this game a real winner. It can even be played to completion in several different ways, giving it repeat playability that is unusual in a role-playing adventure. (Solo play; Joystick & keyboard; Pause; Blank disk required for game-saving.) Atari XL/XE and Commodore 64/128 versions reviewed.

Recommended. (MSR \$29.95)

SMART MONEY (♦♦♦♦/♦♦♦♦1/2) is a personal and small business finance management package from Sierra that goes beyond the currently popular programs of this type in a number of areas. At its most basic, the program is a godsend at helping you keep track of where your money goes. And knowing WHERE your money goes is the first step to controlling your finances instead of letting them control you. Employing an easy-to-understand, icon-based menu system that will be familiar to users of Sierra's "Homeword" word processing program, **SMART MONEY** lets you keep track of all the money you spend (including cash, checks, and credit card transactions.) The program allows for "automatic" transactions that occur on a regular basis, such as paycheck deposits, utility payments, etc., even reminding you of when payments are due. Extremely flexible budgets can be set up with ease. The program not only makes balancing your

checkbook a snap, but it also simplifies your month reconciliation of bank statements, even helping you find source of errors easily. The printing functions of the program give you detailed analyses of net worth, profit and loss budgeted vs. actual income and expenses, the ability to print checks, and much more. And you do not need a background accounting to understand and use the program.

More Useful Than Others

Where Sierra goes beyond other financial programs of this type is in making their program just a little more useful. In all, there is no copy protection and therefore no hard about backups of the program or installing it on hard disk. Second, Sierra has included functions that help you deal with loans, IRAs, annuities, stocks, and investments. For example, the program can help you determine amount of equity in your home, now and in the future. It can calculate the declining balance of a loan, print amortized schedules of loans, annuities, and even perform investment analyses showing annual and percentage gains for your stock portfolio. If you need better control of your money (and who doesn't?), **SMART MONEY** can help you, no matter what your income level. The program is well designed and documented, easy to use, and of excellent value. (Apple II version requires 128K; supports Apple Memory Expansion card, Applied Engineering's Checkmate RAM cards; copyable to UniDisk 3.5, ProDOS-based hard disk. IBM PC/PCjr/compatibles version supports hard disk; color graphics card optional. Both versions support mouse, serial and parallel printers, monochrome and RGB composite color monitors.)

Recommended. (MSR \$79.95)

TASS TIMES IN TONETOWN (♦♦♦♦/♦♦♦♦1/2) is an illustrated text adventure by Interplay Productions and Activision. (Interplay also did "Mindshadow" for Activision.) Set mostly in the rather bizarre community of Tonetown, the game is a quest to find your lost Gramps. The story begins normally enough at Gramps' house, where all that seems to be left of the poor old gent is a greasy receipt for pepperoni and anchovy pizza. (Though he loved to eat things, they always gave him nightmares.) Once you find a few clues and make your way to Gramps' lab, you're on your way to one of the strangest journeys ever taken in a computer game. You're headed for another parapsphere far from Earth, a region known as Dreamland, Outer Edge, where you'll find an ultra-plus village known as Tonetown.

Get Tass!

To make any progress finding Gramps in Tonetown, in order just to survive, you have to establish a whole new mirror of that's even beyond valley-girl chic. Like what you're after is to get a take on being totally tass, really ultra-tone, and not being thrown out of town like that toneless Jonboi Walter was. (Read all about it in the "Tonetown Times.") Ask Elmo to take you to the Tique, where Chaz can set you up with ultra-tass jumpsuits and hooplets and that ultra-plus ultra-dyeorama look. Soak up the tass atmosphere after mooning at Fast Freddie with a fizzie and a globurger. But stay away from Franklin Snarl, the villain with green scales who is blobbets to Tonetowners. (Snarl is definitively untass.) It's up to you to establish your own tassitude, or you'll be out of Tonetown on your ear without your Gramps. And don't forget your picks!

Tonetown Is Weird

Before you think we've taken total leave of our senses, it's time to slide back into normal-speak. By now you've probably gotten to the point that Tonetown is one very weird place. In fact it's like a cross between the Twilight Zone and a bizarre sci-fi video. Strange as the place is, though, it turns out to be a lot of fun to try to get yourself in sync with this strange new dimension. We were having so much fun getting tass and ultratouch that we almost lost sight of why we were in Tonetown in the first place! Unfortunately, we never did find Gramps. Looking on the bright side, though, that means that we have a good excuse to take another trip to Tonetown!

Unconventional

This illustrated text adventure turns out to be unconventional in more ways than just its setting. Keyboard entries are kept to a minimum by relying on a series of icons for frequently used commands, such as "get," "tell me about," "look," "he

compass directions, and a few others. Use the keyboard if you must, but it's a lot more fun (and easier) to use a mouse or joystick. There's something very natural about clicking on an object for "get," then clicking on an object in the picture area, and finding that object in your pictured inventory. Of course, there are times when you must use the keyboard. But mechanics alone don't make an enjoyable game. It helps if the graphics are well drawn, as they are in this game. The story has to keep you interested and involved, and **TAS TIMES IN TONETOWN** certainly does that very well indeed. Take a trip to Tonetown and get tassed—the experience will make you ultra-tone! (Solo Play; Joystick, mouse &/or keyboard; Blank disk required for game-saving.) Apple II and II+ PC/PCjr versions reviewed; also available for Commodore 64/128 at \$34.95; also available for Amiga and Macintosh coming for Atari ST at \$44.95. Recommended. (MSR \$39.95)

Critically Speaking...

Apple-Compatible

BATTLEFRONT (♦♦♦/♦♦♦♦) is the fourth in a series of wargames by Roger Keating and Ian Trout of the Australian company, Strategic Studies Group, distributed through the Affiliated Label program of Electronic Arts. Keating and Trout's simulations all have a common characteristic which is worth noting: they are exceptionally easy to learn without sacrificing any accuracy or realism in the battle scenarios. This program is easy to learn because the authors do not assume that the player knows everything there is to know about wargaming in general, and they provide a really good, step-by-step tutorial that gets the player familiar with the mechanics of the program quite painlessly.

Land Combat at Corps Level

This particular wargame simulates World War II land combat at the corps level. The computer can control either or both sides, or you can play against a friend. Each side controls up to 10 battalions (three divisions, including infantry, armor, artillery, air cavalry, and marines). The program includes four scenarios and a design kit for building your own scenarios. The scenarios are Crete (1941), Stalingrad (1942), Saipan (1941), and Bastogne (1944-1945). The game proceeds under player control in standard wargaming fashion, with external factors such as troop fatigue, air and naval support, and changing weather conditions influencing battle outcomes. Also, battle maneuvers are changing at all times, adding more uncertainty to the outcomes and a degree of extra realism to the game. Unlike many wargames, a typical scenario can be played to completion in less than two hours. Once again, Keating and Trout have created a detailed and realistic set of wargaming scenarios that are easy to learn and rewarding to play many times over. (Solo or competitive play; Keyboard.) Apple II version reviewed; also available for Commodore 64/128. Recommended. (MSR \$39.95)

OGRE (♦♦♦/♦♦♦♦) from Origin Systems (distributed through the Electronic Arts Affiliated Label program) puts wargaming in a 21st Century setting dominated by the emerging, cybernetic super-tank, the Ogre. The computer game is based on the popular Steve Jackson boardgame of the same name. The playfield is a two-screen hex map littered with buildings and craters from past nuclear explosions. Whether played by two people or by one against the computer, the objective of the Ogre is to destroy the opponent's Command Post. The opponent (the human player in a solo game) has to defend the Command Post by destroying the Ogre. As simple as it may sound when reduced to its essentials, the playing of the game can mean involved and intricate strategies on offense and defense. The defensive player has forces (infantry and armor) which are deployed in anticipation of the Ogre's attack. Although the defensive player's forces are superior in number to the Ogre, the Ogre is overwhelmingly fast and strong. **OGRE** is a game featuring strategy, not action. It will appeal primarily to those who like the planning and scheming aspect of simulated warfare. The box and instructions for **OGRE** refer to the ability to use a mouse to control the game, which would be especially

good with the program's pull-down menus. However, the mouse option does not appear on the selection screen of the game. (Solo or competitive play; Joystick or keyboard; Blank disk required for game-saving.) Apple II version reviewed; coming soon for Atari XL/XE and ST. MSR \$49.95

SHARD OF SPRING (♦♦♦/♦♦♦♦) is a new fantasy role-playing game from Strategic Simulations. According to the story, the people of the Island of Ymros have been robbed of eternal spring, which had been made possible by the Shard of Spring, a gift of the Red Sorcerer. The evil sorceress, Siriadne, has shattered the crystal shrine and made off with the Shard, plunging the land of Ymros into endless cold. Siriadne has demanded tributes of food, sacrifices, and gold which have impoverished the people of Ymros. Now it is up to you to recapture the Shard of Spring, defeat the evil Siriadne, and free Ymros from the bitter cold.

Fairly Typical Quest

In most respects, **SHARD OF SPRING** is a fairly typical quest. It allows for a party of one to five adventurers, giving you the option of starting with a ready-made party on the disk or creating your own from scratch. Should you choose to establish your own characters, you can keep up to five parties active on your character disk at one time, although only one party can explore at a time. Characters are built by choosing their race (human, dwarf, troll, elf, gnome), their class (either warrior or wizard available to humans, but other races have pre-set class), and their traits (speed, strength, intellect, endurance, skill). Some traits are pre-set by the program: hit points, spell points, and experience. Then, depending on the class of your character and the amount of its intellect, you can assign a whole range of warrior or wizard skills. When you're satisfied with your cast of characters, you can assign them to one or more adventuring parties and prepare to start exploring the Island of Ymros, including its dungeons.

Exploring and Combat

As you move on the pictorial strategic map of Ymros, your party is represented by a single icon. Probably the first thing you will want to do, before you start running into monsters, is to enter the nearest town and acquire some equipment, such as armor and weapons. That done, your characters are at least minimally prepared for their first monster encounter, which will happen very soon after they start exploring. It is in the combat sequences that **SHARD OF SPRING** departs from other games of this type. The action zooms in during combat, allowing you to see and move all of your characters individually. The setting in this combat arena will duplicate the terrain of the area on the larger map where your characters encountered the monsters. The combat action proceeds in turns, allowing movement and/or attack, and the combat sequences are animated. As a result, combat is more interesting in this game than is sometimes the case in graphic-oriented fantasy role-playing games. Incidentally, combat may consist of any combination of physical attack and magical spells, depending on the skill and experience of your adventurers.

Wide Range of Magical Elements

Fans of the fight-and-explore style of graphic adventures will enjoy **SHARD OF SPRING**. The combat sequences are more involving than most, and most players will really enjoy the very wide range of magical elements in the game. Graphics are quite good, especially considering that they are limited to a portion of the screen. Losing some picture area is worthwhile, however, when it means that there is more status information immediately available to the game player. (Solo play; Keyboard; Blank disk required.) Available for Apple II only.

Recommended (MSR \$39.95)

16-Bit Apple II Announcement?

We may be days away from the official Apple announcement of their long-awaited 16-bit Apple II. Planned for full compatibility with previous Apple IIs, it will also feature increased memory, and look something like the Macintosh. Look for the announcement right around Sept. 20. They may also announce a lower priced (under \$3000) Laserwriter.

Critically Speaking...

Atari XL/XE Compatible

WORLD KARATE CHAMPIONSHIP (♦♦♦1/2/♦♦♦1/2) from *Epyx* has now been converted to Atari format, giving owners of these computers their first new martial arts game since Broderbund's "Karateka." The game is an arcade-style contest in which your martial arts fighter faces a series of tougher and tougher computer-controlled opponents in eight international settings. (This is true even in the two-player game against a human-controlled opponent, since the game requires the winner of a match to go up against the computer fighter in order to advance.) There's plenty of variety in this game, as you learn to master the 16 different moves at your command. And the moves really look great! There are the usual punches and kicks, plus graceful leaps and tricky spins. These martial arts fighters are very energetic, and they crumple convincingly when they are hit solidly. They even show different facial expressions under certain conditions. In between tournament fighting rounds, there are tests of skill: breaking bricks with your fighter's head or dodging flying spears and knives.

Authentic-Looking Moves

Atari owners looking for a good martial arts fighting game will really enjoy this one. Not only are the moves graceful and authentic-looking, but the action is exciting and quick. (Unlike the original Commodore 64 version of this game, the Atari version can be speeded up or slowed down a little if you're not happy with the standard pace.) Typical of Epyx programs, the scenic backgrounds are lush and beautiful. The music, which can be turned off, is oriental-sounding, and the sound effects add to the realism of the action. (Sound effects, too, can be turned off, but we can't imagine why a gamer would want to.) **WORLD KARATE CHAMPIONSHIP** has plenty of punch, with depth provided by a good repertoire of authentic moves. And Atari owners can finally stop envying their Commodore-owning friends who have had a series of new martial arts games to play recently! (Solo or competitive play; Joystick; Disk.) Atari XL/XE version reviewed; also available for Commodore 64/128. Coming soon for Apple II and IBM. Recommended. (MSR \$29.95)

FIGHT NIGHT (♦♦♦1/2/♦♦♦1/2) has just been converted for Atari owners by *Accolade Software*. Originally available for the Commodore 64, the game is a whimsical look at the world of boxing as you have the opportunity to go up against five different contenders who are cartoon-like characters. It's a straight-ahead boxing match which has five levels of difficulty, dependent on which opponent you choose. There are three rounds in which you can play against a friend, the computer, or watch the computer play itself. Your moves are directed by joystick as you can jab, move, fake a blow, and move left and right. You can win by points or knock-out.

Boxing Construction Set

The game also includes a construction set where you can choose from various heads, bodies, colors, legs, and control. The control is the most important of the choices as you choose the power of your boxer's jab and punch, as well as balance between offensive and defensive moves if you're constructing a computer-controlled boxer. You can save and modify your boxer for later use.

Pretty Routine

The match itself is pretty straight-ahead which can prove boring; however, Atari owners don't have the wealth of boxing games to choose from. Don't get us wrong...it is a very cute game with very colorful graphics. The construction set is a nice feature but it's certainly not the most complicated construction set we've seen. Our guess is that a great deal of memory was used up to come up with the bright, animated graphics. You may want to try this one out before purchase, if possible to see if it will hold your interest (we know, Atari owners are starved for software; however, there is more coming!) (one player; two-player simultaneous; joystick-controlled; also available for Commodore 64/128 and Apple) (MSR \$29.95)

Critically Speaking...Apple-Compatible

Stuart Smith's AGE OF ADVENTURE (♦♦♦1/2/♦♦♦1/2) from *Electronic Arts* brings together classic programs from the same designer who created "Adventure Construction Set." The two games included here are **ALI BABA AND THE FORTY THIEVES** and **THE RETURN OF HERACLES**, go back to the early days of adventuring on home computers. Neither has been seen available for some time, but it's great to see them back in this combination package at an irresistibly low price. Graphics and sound have been improved over the original versions of both programs. Although there is no "Computer Game Hall of Fame," these two games would certainly be appropriate choices if anyone were to start one.

Ali Baba Rescues the Princess

ALI BABA AND THE FORTY THIEVES builds a great game around one of the best-loved adventure tales in all of world literature. It is the story of the Sultan's humble messenger, Ali Baba, who sets out to rescue the kidnapped daughter of the Sultan, the fair Princess Buddir-al-Buddoor. In the classic story, Ali Baba faces many perils, horrible beasts, cutthroat thieves to save the Princess and return her to her grateful father. The game gives you the chance to become Ali Baba yourself and rescue the princess. Though Ali Baba of the classic tale faced the dangers alone, you can even enlist the aid of other characters, taking advantage of their special skills and talents.

Action-Oriented Adventure

The game begins with a rendition of Rimsky-Korsakov's "Scheherazade" that sounds amazingly good for a notoriously tinny music reproduction capabilities of the Apple II. This music does a good job of setting the mood for a game set in ancient Persia, and we enjoyed having it play throughout the game, even though it can be turned off, if you wish. The adventure itself is action-oriented. You control a simple figure of Ali Baba as he explores the 62 different rooms in the game. There are LOTS of monsters to fight and avoid--110 different kinds according to the package, although we didn't see them all. And there is treasure to be found. (What would an adventure game be without booty? There have to be rewards besides a pat on the head from a grateful Sultan, right?) Of course, there is magic, too, and wonderful runes to use which are full of clues and more than a few wisecracks. One rune tells of Ali Baba's brother, a greedy sort who was escaped the thieves' den because he couldn't remember the right magical incantation. The dummy thought that saying "Open barley" would let him pass through the door.

Multiple Player Option One of the most enjoyable aspects of **ALI BABA AND THE FORTY THIEVES** is the ability to add new characters to your party any time you want. You can let your friends join in on the fun by taking turns controlling one character or a whole group of them. Very few adventure games have this kind of flexibility. Overall, we found **ALI BABA AND THE FORTY THIEVES** an absolute delight. The game has a great storyline, lots of options, and enough random events to make it fun to play over and over again.

Game of Greek Mythology

THE RETURN OF HERACLES delves into a different branch of the classics: Greek mythology. In many ways, the structure of this game is similar to that of **ALI BABA**, since there are many characters for you to control. However, in **THE RETURN OF HERACLES**, each character you add begins the game at a predetermined location. If you want to bring them together as an adventuring party, you must help each one fight his own way through a series of mythical monsters and eventually rendezvous with the others at one of the points on the map of ancient Greece which forms the playfield. As in **ALI BABA**, several people can control one or more of the 19 characters in alternating turns.

Great Entertainment

The ultimate goal, whether you're playing as Heracles or one of the other Greek heroes, is to complete the fabled twelve Herculean tasks. Zeus assigns the tasks one at a time, and you must consult his Oracle for each assignment. The Oracle of Delphi can provide clues and further information about your current task, providing you grease the palms of her sacred

Critically Speaking...Apple-Compatible

is. While THE RETURN OF HERACLES is every bit as fun to play as ALI BABA, it has the added advantage of being educational because of the richly varied references to Greek mythology in the game. (Parents take note!) Together, the two games provide many hours of great entertainment for solo or group play. This package belongs in the library of all adventure gaming fans! (Solo or cooperative play; Joystick or keyboard; 64K; Blank disk required for game-saving.) Apple II version reviewed; coming soon for Atari XL/XE. Recommended. (MSR \$14.95)

THE ROCKY HORROR SHOW (♦♦♦♦/♦♦♦♦1/2) is one of the first releases from *Electric Dreams*, the new Precision import label. It is based on the hugely successful play by Richard O'Brien which became a movie that attained cult status in Europe and the United States. This is really a play-at-your-own-risk kind of game, because if you've never experienced the delicious madness of a midnight showing of "The Rocky Horror Picture Show," then you won't have the foggiest notion of what all this craziness is about. In fact, if you're not familiar with the "Rocky Horror" phenomenon (or if you've seen the movie and didn't appreciate the campy, sexy humor), then you just might want to tune out of this review right now.

Was a Dark and Stormy Night...

THE ROCKY HORROR SHOW game follows the theme and feel of the movie, opening with a lightning-struck view of a gloomy castle. The infectious musical theme from the movie, "The Time Warp" sets the mood. (If you know and love the movie, it's hard to resist singing, "Let's do the Time Warp again...") Whoops--back to the story before we get carried away! Brad and Janet, super-straight young American sweethearts, find themselves at the mercy of the castle's host when they have a flat tire on a stormy night. The game begins as you choose to play the role of Brad or Janet and enter the home of Dr. Frank N. Furter, mad scientist and leader of a pack of very strange people. As Dr. Furter explains himself in the movie, he's "a sweet transvestite from trans-sexual Transylvania." (In the game, Dr. Furter modestly keeps his robe on, concealing the attire worn by the character in the movie: satin corset, garter belt, black stockings, and high heels. We warned you about tuning out!) Since Dr. Furter is a huge fan of "scientific" experimentation, he has frozen your sweetheart in stone with his Medusa machine. With the limited time left before the castle turns into a spaceship and takes off for trans-sexual Transylvania, you must find and assemble all the pieces of the De-Medusa machine to bring your sweetheart back to life.

Of Collection of Characters

Running all over the rooms of the castle and finding the pieces of the De-Medusa machine wouldn't be so difficult, even with the time limit, but for the interference of Dr. Furter's odd little collection of friends. There's Rocky Horror, the vision of masculine perfection who is Dr. Furter's latest creation. The Doctor will invite you "come up into the lab and see where on the slab.") And there's another of the Doctor's experiments, Eddie the rock-and-roll motorcycle maniac. Riff Raff the butler carries an anti-matter laser gun. And the ladies are no less eccentric: the frantic Columbia and the you-keeper, Magenta of the Bride-of-Frankenstein hair. They all fit in the way. Some are even lethal. And they have such a bizarre sense of humor. One of their favorite tricks is to bump into you, steal your clothes, and leave you standing there in your underwear looking silly. That might be bearable, even with the insults they keep directing at you, but you have to find your clothes before you can continue assembling the De-Medusa machine.

Frantic and Fun

THE ROCKY HORROR SHOW game is frantic and fun. The music is wonderful, even on the Apple, and the graphics are nicely animated and represent the familiar characters well. The game is a guaranteed winner for anyone who knows and loves the play and movie. We're not too sure how well it will play for anyone unfamiliar with the cult of Rocky Horror, so please understand that our rating is based on the premise that you are

a Rocky Horror fan. If you are, then this game will give you a whole new way to enjoy the special craziness that is Rocky Horror. (Solo play; Joystick.) Apple II version reviewed; also available for Commodore 64/128 at \$29.95. Recommended. (MSR \$34.95)

DiskWILL (NA/00001/2) from *Self-Help Legal Services* is an extremely easy-to-use program for preparing a legal will in the comfort and privacy of your own home. The program was written by a lawyer and is meant specifically for non-lawyers. The document generated by the program, once properly signed and witnessed, is completely legal in all states except Louisiana. Unless you have an extremely large and complicated estate, there is no real need to consult an attorney at all when you use DiskWILL.

Getting Around To It

Like all too many people, we had never given much thought to preparing a will. Not that any of us thinks we're immortal, but making out a will always seems to be one of those perennially postponed tasks that we'll "get around to some day." With this inexpensive program, a computer, and a printer, "some day" is a lot easier to turn into "right away," especially if you don't have to deal with the inconvenience and expense of setting up an appointment with a lawyer. Using the program is a simple matter of booting the disk and answering a very clear set of screen prompts. The accompanying "WillTEXT" explains everything you need to know in the clearest possible terms, with an absolute minimum of confusing "legalese." When you're satisfied with the information you have entered, you can preview your completed will on the screen before printing it. The program does all the work of placing your information within the context of legally appropriate (but not confusing) language. There are even whole sections of the will that are entirely predrafted, requiring no input from you whatsoever. The whole procedure took us about 30 minutes from booting the disk to finished print-out: simple, painless, and inexpensive.

Wills for Two

The disk as provided can be used by two people, and all information except the legal names of the two people can be changed as many times or as often as you wish. The lack of ability to change a will-writer's name could conceivably be an inconvenience in the case of a woman who remarries, but otherwise the system seems to be very well thought out. This is a very useful program that saves money and time and may induce some people to write a will who otherwise might not have gotten around to it. (Apple II version reviewed; also available for Commodore 64/128 and for IBM PC/PCjr/XT/AT at \$29.95. If not available at your software store, the program may be ordered directly from Self-Help Legal Services, P.O. Box 10694, Minneapolis, MN 55440, phone 612-924-3323; add \$2.00 for shipping; MN residents add 6% sales tax.) Recommended. (MSR \$24.25)

Joystick and More from Epyx

This month marks the introduction of the EPYX 500XJ joystick (MSR approx. \$20), an ergonomically designed controller with microswitches that carries an impressive 5-year warranty. (We've been using a prototype of the stick since June, and we like it a lot because it's not tiring to hold.) THE MOVIE MONSTER GAME for Commodore 64/128, delayed by programming problems, should also be ready this month. And Epyx has just announced a new game, DESTROYER, for C64/128, Apple, and IBM. It combines plenty of action with a realistic simulation of naval warfare and lets you be commander of the ship or gunnery officer. New conversions of WORLD KARATE CHAMPIONSHIP were also announced recently for Apple and IBM. (See Availability Update for specific release dates.) Upbeat Mood The mood at Epyx is noticeably upbeat these days. Like many other software manufacturers we've talked to recently, their sales and profits are up. Epyx is looking forward to a good Christmas season, and they're preparing for it with their first-ever TV advertising to run on MTV around Thanksgiving.

THE VIDEO GAME UPDATE

Critically Speaking...Atari 7800-Compatible

GALAGA (♦♦♦/♦♦♦) is the sequel to "Galaxian," and this version is an *Atari* adaptation of the Bally-Midway arcade game licensed through Namco. It's a kill-a-bug-get-a-point type of game, an exciting and energetic venture into video space. The object, similar to other games of this sort, is to destroy all the insects (in this case hornets, bees, and their accompanying flagship), to go on to the next wave. (There are 32 waves in all.) It's very similar to the coin-op game, complete with the original music, but some of the insects are different. (Butterflies have become hornets, for example.)

Slide-and-Shoot

Anyone who has ever played a slide-and-shoot game will have no difficulty figuring this one out, even without help from the manual. The player's ship moves from side to side at the bottom of the screen, firing upward at the advancing hordes of insects and their accompanying flagships. These enemies fly in swirling and swooping patterns while firing upon the player's ship. The speed of their flight and the strength of their firing attack depend upon the skill level chosen: Novice, Advanced, or Expert. Both Novice and Advanced levels begin at the first wave, with faster and more intricate movement at the Advanced level. The player who chooses the Expert level shoots straight to the tenth wave, where the action is much faster and far more challenging. The insects are always the same from wave to wave, varying only their speed, flight patterns, and intensity of firing attack. After a few waves, the action changes momentarily to a "Challenging Wave," in which formations of non-shooting insects zip by, giving you the chance to earn bonus points.

The Flagship's Surprise

Each bee or hornet is worth a certain number of points, but the flagship provides a special surprise. Besides being worth more than twice the points of the insects, a flagship can descend and release a tractor beam to capture your ship. You have a chance to get it back by destroying the flagship, causing the captured ship to return and bond with your other ship for double firing action. Of course, your new double-wide ship presents a bigger target for enemy missiles, too. There are two cautions to observe about the flagship, though. You have to be careful not to shoot and destroy your captured ship instead of the flagship, and you can't let your last ship get caught in the tractor beam, which will end the game.

Kill Or Be Killed

This is a game for anyone who likes the basic kill-or-be-killed theme. The double-ship concept only makes it more exciting and fun. It's a little difficult to discern hornets from bees, but in the heat of gameplay, that becomes secondary. The overall graphics are well done, especially on the Expert level when the insects fly into formation so fast that it looks like animation instead of computer graphics. Just watching all that swirling motion is fantastic, but playing it is even better! (Solo or 2-player alternating; Pause.)

Recommended. (MSR \$12.50)

—Tracy Miller

DIG DUG (♦♦♦/♦♦♦) is another in the first available titles for the 7800 from *Atari*. A popular game which has been produced for several game and computer systems, it features Dig Dug, the little guy in the white space suit who burrows underground tunnels, creating his own mazes. Within the subterranean world, there are firebreathing Fygars and trouble-making Pookas who want to bury you alive. There are two ways to deal with these enemies—crush them by tunnelling strategically under a boulder, causing the rock to fall on them, or blow them up by extending the little blue hose into it and pressing your joystick button until the monster expands and explodes. The Fygars can also breathe fire, so Dig Dug must be especially careful! If Dig Dug dawdles too long, the Pookas and Fygars turn into ghosts, making them particularly dangerous as they are not restricted to the tunnels as they move directly through the ground, reaching Dig Dug much more quickly. They return to their former selves only when

they enter a tunnel. As ghosts, they also can not be blown up. Once all the monsters are destroyed, it's on to the next level.

Still Loads of Fun

This is one of those delightfully silly games that was fun a coin-op and continues to be a mainstay of the arcade classics. The graphics are very similar to the earlier S&S version with splashy colors and very cute characters. This version follows the original (unlike the Atarisoft (T) computer version) with the pictorial representation of flow at the top of the screen to indicate playing level. There are two levels of play for all you tunnel fanatics out there. In the way, this is another 7800 game that is one you may want to think twice about purchasing if you have the 5200 as they are virtually identical. (On the other hand, as we've pointed out before, due to the fact that the 5200 has been discontinued and repair can be expensive and difficult to find, you may want this for your 7800 library anyway as the cost is so reasonable.) (one player; two player alternating; pause) Recommended (MSR \$14.95)

FOOD FIGHT (♦♦♦♦/♦♦♦♦) is the first truly "new" title *Atari* has released for the 7800 in that it has not been available for any other home system. That fact has not been missed by 7800 owners as severe shortages of the title have been reported coast to coast. The premise is simple in this coin-op based game. Charley Chuck loves to eat so where he went to a carnival, he headed straight for a food fight contest. In order to win, and get to the ice cream cone on the left side of the screen, Charley must race to the cone before it melts (2 seconds), without falling into one of the manholes, touching his chef opponents, or being walloped by flying food that the chefs have tossed at him. Depending on the level of play (there are four skill levels), Charley is pitted against two or four chefs. They pop out of the manholes and take-off at Charley who, as he's running for the cone, can pick-up food and toss it at the chefs. Charley can only stop temporarily as they will, once again, pop up through the manholes. When Charley reaches the cone, the chefs scare off until the next, more difficult screen. The second screen features a chocolate cone and more food to throw at the chefs. There's everything from bananas to watermelon, cherry spinach, and more that Charley will be able to use as weapons against the aggressive chefs. The pace will become more and more frantic as the levels increase.

A Big Winner

We were anxious to get our hands on this particular title as it is the first of the truly "new" titles and we weren't really disappointed. The graphics are just as cute as they came. Charley is quite a character as he opens his mouth in a big way to gobble down the ice cream cone. The chefs are graphically very good, and the various types of food are identifiable. The gameplay is fast-paced and will keep any arcade action fan busy for hours. We kept trying to tear ourselves away to move on to the next game to review, and found ourselves muttering, "just one more time and we'll be a little better." - a sure sign of a game with staying power! This is a definite for your 7800 library. (one player; two player alternating; pause)

Recommended (MSR \$14.95)

Video Ad Blitz Coming

As you receive this issue, both Nintendo and Sega are preparing to begin massive, multi-million dollar advertising campaigns covering television and print media. From what we've been told of the two campaigns, anyone who has already heard the news should be very aware of the rebirth of video games by Christmas. It certainly looks as if Christmas 1986 will be a very bountiful holiday for video gamers!

Sega Is on Schedule

With the critical F.C.C. approval finally granted in mid-August, Sega is busy with last-minute details and prepared to release its Master System right on time at the beginning of September. According to a Sega spokesman, five games will be available at the same time as the Sega Master System: **TRANSBOT** and **GHOST HOUSE** on 256K Sega cards (MSR \$30 each) and the 1024K Mega Cartridges **CHOPLIFTER**, **FANTASY ZONE**, and **WORLD GP** (MSR \$35 each). Later this month, the plan to release the Sega Cards **MY HERO**, **TEDDY BOY**, and **F-16 FIGHTING FALCON** along with **BLACK BELT** and **ACTION FIGHTER** on Mega Cartridge. Including the two games, **HANG ON** and **SAFARI HUNT**, which are included with the Master System, that will mean a respectable total of seven games in the first month of release. (The Sega Master System, including Power Base, two Control Pads, Light Phaser gun and Combo Mega Cartridge with two games carries a manufacturer's suggested retail price of \$150. There is also an alternative Base System with **HANG ON** and **ASTRO WARRIOR** on Combo Mega Cartridge, but without the Light Phaser, which will be available in some locations at MSR \$125.)

More Games Coming

Sega has plans to release many more games over the next six months, but not all of the titles have firm release dates yet. Among others, gamers can look forward to a whole series of sports games on Mega Cartridge, all with names that begin with "Great," including **GREAT BASEBALL**, **BOXING**, **FOOTBALL**, **GOLF**, **ICE HOCKEY**, and **TENNIS**. A Sports Pad (MSR \$60), which is a trackball-style controller, will be used with these games. Other planned titles on Mega cartridge include **PRO WRESTLING** (first announced as **ALL-STAR WRESTLING**), **THE NINJA**, **BANK PANIC**, and the Combo Mega Cartridge, **MARKSMAN SHOOTING** with **TRAP SHOOTING**. We were also told about **RAMBO**, a game based on the popular movies, in which the normal single-shot action of the Light Phaser will be converted to semi-automatic firing! Watch these pages for reviews, beginning with our evaluation of the Sega Master System next month.

Delays, Shortages in Atari 7800 Software

Although eight titles have now been released for the Atari 7800, only about half of them are readily available at such locations as Toys'R'Us, according to numerous reports from our readers around the country. After the release of the 7800 Pro System unit and the first seven titles in June, **GALAGA** is the only follow-up release so far. (**GALAGA** is reviewed in this issue.) And three titles have disappeared from the most recent list of 7800 titles from Atari: **MOON PATROL**, **STARGATE**, and **RESCUE ON FRACTALUS**. We were not able to find out whether the first two have been merely delayed or totally cancelled. We were told that the release of **RESCUE ON FRACTALUS** is "up in the air" due to programming problems. Looking at the balance of Atari's schedule of 7800 games set for release between now and Christmas, we think it's likely that quite a few of them will be "bumped" to early 1987. Even with some delays and cancellations, though, Atari can still make a good showing for the important Christmas selling season if they manage to release at least half of their announced games (10 or more between now and December). Anything less than that, however, will make it difficult for Atari's system to compete effectively against the two Japanese giants, Nintendo and Sega.

MOVED???

Don't forget to tell us so you don't miss any issues. Send us your new address, along with your old zip code and subscriber number (the last FOUR digits of your mailing label) and we'll deliver the rest!

Konami and Nintendo Sign Agreement

Konami, Inc. signed a licensing agreement with Nintendo on July 8, 1986 which makes Konami an approved third-party developer of software for the Nintendo Entertainment System (NES) in the United States. This move had been expected because Konami's parent company in Japan already produces a number of very popular titles for the Japanese version of the Nintendo system, the Nintendo Family Computer. According to Ben Har-El, president of Konami, Inc. of the U.S., the company's first NES game, **GRADIUS**, will be in stores no later than mid-November. Although this title will not be familiar to U.S. game players, Mr. Har-El told us that it is a top seller in Japan and is currently the only space game available for the Nintendo system. He also told us that this is just the beginning, as Konami expects to have several more games ready for this Christmas season. And Konami is also moving at "full steam" on software for computer systems other than the NES. We expect to have more news from Konami next month.
